| <b>fruit</b>                                 |                                                                                                                                                                                                                                 |                             |
| HUMULUS LUPULUS<br>SMOOTH CONE               | (Hop Vine) Ex commercial NZ bred hop with striking female flowers in autumn. Great as an ornamental, for brewing and for floral arrangements. Requires sun and summer water. Needs to be trained over arch or supported. Hardy. | Deciduous                   |
| RHUBARB VICTORIA                             | A delicious sweet red-stemmed rhubarb. Requires rich soil and plenty of water and sun when growing.                                                                                                                             | Deciduous.                  |
| <b>Citrus</b>                                |                                                                                                                                                                                                                                 |                             |
| CITRUS GRAPEFRUIT<br>GOLDEN SPECIAL          | A large, thin-skinned, juicy, tangy, sweet fruit. Golden skin with orange flesh and few seeds. Prefers good drainage, regular feeding and warm sunny position. Protect from heavy frosts. Ripens July to November.              | Evergreen 2mx2m             |
| CITRUS GRAPEFRUIT<br>GOLDEN SPECIAL<br>DWARF | A large, thin-skinned, juicy, tangy, sweet fruit. Golden skin with orange flesh and few seeds. Prefers good drainage, regular feeding and warm sunny position. Protect from heavy frosts. Ripens July to November.              | Evergreen                   |
| CITRUS GRAPEFRUIT<br>STAR RUBY               | Red-fleshed juicy flavoursome fruit with yellow skin. Plant in a sheltered, sunny position. Fruit holds well on tree. Ripens August-November. Protect from heavy frost                                                          | Evergreen Ht. 1.5m          |
| CITRUS KUMQUAT<br>MEIWA                      | Shiny, thin skinned fruit about 2cm across with tart and distinctive flavour. Good for marmalade. Highly ornamental shrub. One of the hardiest citrus. Prefers a prominent sunny position.                                      | Evergreen                   |
| CITRUS LEMON MEYER                           | Hardy tree which produces large sweet fruit at an early age. Requires good drainage and warm sheltered position. Keep well watered and feed regularly. Avoid deep cultivation. Protect from heavy frost.                        | Evergreen. Ht. 1.5m         |
| CITRUS LEMON YEN BEN                         | Lisbon type lemon with thin skin. This is a prolific bearer. Fruit are juicy. Good variety for home gardener as smaller growing and hardy. Will need warm sunny position and protection from frost.                             | Evergreen                   |
| CITRUS LEMON YUZU                            | Rare Japanese citron lemon. Sought after for it's unique sour, tart flavour of zest and juice. More cold hardy than most citrus. Forms attractive small, spiny tree. Requires full sun, good drainage and regular feeding.      | Evergreen Ht 1.5m<br>X 1.2m |
| CITRUS LEMONADE                              | Novelty citrus hybrid.. Crops of lemon shaped medium sized fruit, slightly sweeter than lemon. Juicy, mild flavour. Prefers good drainage, regular feeding and warm sunny position. Needs protection from frost.                | Evergreen                   |
| CITRUS LIME BEARRS                           | This improved selection of Tahitian Lime produces small, thin-skinned, almost seedless fruit. Needs a warm, sheltered, frost free site and well drained, fertile soil. Ideal container plant.                                   | Evergreen                   |
| CITRUS LIME BEARSS                           | This improved selection of Tahitian Lime produces small, thin-skinned, almost seedless fruit. Needs a warm, sheltered, frost free site and well drained, fertile soil. Ideal container plant.                                   | Evergreen                   |
| CITRUS LIME FINGER<br>LIME                   | Small, thorny, with tiny leaves this plant produces finger like fruit which contain pearl like sacs which are tart and juicy, sometimes known as Citrus Caviar. Prefers full sun and protection from frost.                     | Evergreen ht 1.5m           |
| CITRUS LIME KAFFIR                           | The rind and leaves of this variety are popular in Asian cooking although the bumpy-skinned fruit is inedible. Must have a warm, sunny site with frost protection in the winter.                                                | Evergreen Ht 2m             |
| CITRUS LIME TAHITIAN                         | Small to medium sized fruit with deep green skin turning yellow when ripe. Flesh juicy and tangy and relatively seedless. Excellent for refreshing drinks.                                                                      | Evergreen                   |

| Plant Variety                  | Narrative                                                                                                                                                                                                                                             | Spec.                |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>fruit (continued)</b>       |                                                                                                                                                                                                                                                       |                      |
| CITRUS LIMEQUAT EUSTIS         | Ornamental citrus which is cross between Mexican Lime and Kumquat. Small light yellow fruit are sweet without bitterness and can be used as lime substitute. Requires full sun and good drainage. Feed regularly. Good container plant.               | Evergreen            |
| CITRUS MANDARIN CLEMENTINE.    | A compact plant with medium-sized fruit with excellent flavour. Ripens late winter. Avoid putting near other Citrus as fruit can become very seedy. Prefers full sun and protection from frosts.                                                      | Evergreen            |
| CITRUS MANDARIN KAWANO         | (Satsuma Type) Medium sized tree bearing heavy crops of sweet and juicy ,easy to peel fruit. Ripens in winter. Needs full sun and warm sheltered position, with moist but well drained soil. Protect from frost.                                      | Evergreen.           |
| CITRUS MANDARIN SATSUMA        | The original selection of the seedless. Easy peel with a thin leathery skin. Fruiting in late Autumn. Prefers full sun with moist but well drained soil. Protect from heavy frost.                                                                    | Evergreen Ht. 2m     |
| CITRUS ORANGE CARTERS NAVEL    | Renowned for its juicy and sweetly flavoured fruit. Ripen in winter and are virtually seedless, easy to peel, and finely textured. Protect from frost .Needs a warm sunny position.                                                                   | Evergreen 2.5m x 2m  |
| CITRUS ORANGE FUKUMOTU         | Navel orange with large round fruit with a strong red tinge to the rind. Sweet tasting, ripens in late winter. Quite a compact grower. Plant in the sunny spot in well drained fertile soil and protect from frost.                                   | Evergreen 1.5mx1m    |
| CITRUS ORANGE HARWOOD LATE     | Average sized, very juicy fruit with a rich flavour. Ripens from November to March. Protect from frost .Needs a warm sunny position.                                                                                                                  | Evergreen.           |
| CITRUS ORANGE SEVILLE          | Heavy crops of bitter oranges ideal for marmalade, liqueurs, preserves, sauces and relishes. Medium to large fruit. The dried peel is often used for seasoning. Upright and vigorous grower well suited for large containers. Fruit ripens June/July. | Evergreen Ht.3m      |
| CITRUS ORANGE VALENCIA         | Closely related to Orange Harwood's Late, Valencia has a sweet flavour and very few seeds. Ripens February to October. Prefers full sun, well drained soil, regular feeding during the fruiting season and adequate water. Protect from frosts.       | Evergreen Ht 3m      |
| CITRUS ORANGE WASHINGTON NAVEL | Seedless variety. The fruit are tender, juicy, and full of flavour which make it a favourite for citrus lovers. Medium large, firm, juicy, sweet fruit. Easy to peel. Needs a sunny spot and protection from frost                                    |                      |
| CITRUS X LIMONIA LIME RANGPUR  | Fruit looks like a mandarin orange, not a true lime. Highly acidic a good substitute for limes. Use for marmalade, cocktails, guacamole etc. Full sun, well drained fertile soil. Protect from heavy frost.                                           | Evergreen 4mx3m      |
| COFFEA ARABICA                 | Green glossy foliage. Clusters of fragrant flowers followed by berries, green turning red. Plants produce within 18 months. Trim to shrub size for conservatory or frost free spot. Makes excellent indoor plant.                                     | Evergreen Ht 2m X 2m |
